NOTICE OF PUBLIC COMMUNITY MEETING

ACCIONA's Battery Energy Storage Project in Kincardine

ACCIONA Energía (ACCIONA) is proposing a battery energy storage system (BESS) in the Town of Kincardine in response to a request for proposals issued by the Independent System Operator (IESO), the coordinator and integrator of Ontario's electricity system. Through this procurement, the IESO is seeking to increase the reliability and stability of our electricity grid as demand for energy is forecasted to exceed our generation capabilities over the next decade.

ABOUT THE RIPLEY BESS

The Ripley BESS will have a maximum nameplate capacity of 400 MW / 1,600 MWh, with the ability to produce a continuous discharge of energy for four hours.

The standalone battery energy storage facilities comprising this project will be located at and connect to an existing substation at the nearest intersection of Side Road 10 and Concession Rd 2.

BESS stores excess energy generated from the grid and releases that energy during times of peak demand or system disturbances, allowing energy to be injected into the grid when it is most needed. As such, our BESS will contribute to the stability of the electricity grid and improve energy security, offering a solution to unforeseen situations that can significantly impact the local and surrounding communities.

| PUBLIC COMMUNITY MEETING

As the world's largest fossil-free utility operating exclusively in renewable technologies, we believe that working collaboratively with landowners, residents, community leaders, and Indigenous nations is imperative to creating a sustainable, clean energy future.

We invite you to attend our upcoming **virtual** Public Community Meeting to learn more about our project and discuss how we can work together to benefit the local community.

- You can join our virtual meeting on November 28 using this link:
