Annual Water Summary Reports:
The Annual Reports for Kincardine, Tiverton, Scott Point, Underwood and Armow Drinking Water Systems were completed and are on the March 16 Consent Agenda for Council approval. All the Reports will be posted to the municipal website and the Kincardine Report will also be sent to the Township of Huron-Kinloss as the Huronville Subdivision receives water from the Kincardine Water Treatment Plant.

Kincardine Waste Management Centre:
The Spills Action Centre was notified on February 5 that leachate from the landfill cell was suspected to be contaminating the Stormwater Management Pond and being discharged to the natural environment. Discharge to the natural environment was stopped and samples collected and sent to SGS for testing. Leachate was hauled to the Kincardine Wastewater Lagoon System as a temporary control measure for the leachate volume in the cell. The sample results were given to the Ministry of the Environment, Conservation and Parks and they gave approval to start discharging again on February 21.
